**APPARECCHI CON LED A TENSIONE COSTANTE 24V DC**  
Le nostre strip LED sono state studiate per essere installate all'interno dei nostri prodotti, pertanto se installate al di fuori dei nostri apparecchi è necessario dissipare in modo adeguato. Il collegamento tra i vari apparecchi/LED deve essere effettuato in parallelo. Si deve calcolare la potenza complessiva dei LED e aggiungere almeno 10%. Di conseguenza procedere nella scelta dell'alimentatore. E' necessario considerare la distanza tra alimentatori e apparecchi/LED per limitare possibili cadute di tensione. Segue la tabella 1 che indica la lunghezza/sezione del cavo e la potenza con alimentazione a 24V DC. Viene indicata la distanza massima tra alimentatore e apparecchi/LED.

**FIXTURES USING LEDS WITH A CONSTANT VOLTAGE OF 24V DC**  
Our LED strips are designed to be installed in our products so if installed elsewhere please consider thermal management by using proper heatsinks. The connection between the various fixtures / LEDs must be carried out in parallel. The total power of the LEDs must be calculated (+ at least 10%) in order to choose the correct power supply. The distance between power supplies and fixtures / LED must be considered to limit possible voltage drop. Table 1 (below) indicates the length / section of the cable and the output (W) using a 24V DC power supply. It shows the maximum distance between the power supply and the fixture/LED.

APPARECCHI CON LED A CORRENTE COSTANTE 350mA  
Il collegamento tra i vari apparecchi/led deve essere effettuato in serie. Il numero di LED per alimentatore dipende dalla potenza e dalla tensione che l'alimentatore rende disponibile. Nonostante l'utilizzo di correnti molto basse è opportuno considerare la distanza tra alimentatori e apparecchi/LED. Segue la tabella 2 che indica la lunghezza/sezione del cavo con alimentazione a corrente costante . Viene indicata la distanza massima tra alimentatore e apparecchi/LED.

FIXTURES USING LEDS WITH A CONSTANT CURRENT OF 350mA  
The connection between the various fixtures / LEDs must be carried out in series. The number of LEDs per power supply unit depends on the available power and voltage of the unit. Notwithstanding the use of very low currents, it is advisable to take into consideration the distance between ballasts and fixtures / LEDs.
